Re: Your letter of June 19, 1978
Our letter of May 18, 1978

Dear Dr. Gori,

This issue must not be put to rest, as you say. Your letter is not responsive to mine.

As you have previously done in your letters, you again based your decision on the tests made by R.E.W. and Reynolds Tobacco in 1972 and 1973. Those tests related to an older cigarette patent of ours. The results of the 1972 and 1973 tests were merely sent to you to serve as a background for our recent patent which you have never tested and know nothing about. This recent patent overcomes the objections made in 1972 and 1973 by R.E.W. and Reynolds Tobacco Co..

Your analysis of the Reynolds Tobacco test was and is incorrect.

It must be made clear that I am not requesting a re-test of the cigarette of the older patent. Our recent patent (U.S. 4,044,775 August 1977) now takes care of factors stated below:

- (1) The taste factor of the cigarette is not changed.
- (2) The "tars", nicotine and gases of both the mainstream and sidestream smoke are lowered and are less than the control cigarette.

The sidestream (smolder) smoke as you know is a serious issue today with respect to its toxic and offensive effect on the non smoker and on the smoker and is the basis of much present pending and future state legislation.
