DATE: February 10, 1986

SUBJECT: COORDINATION/PLANNING OF CHEMOSENSORY RESEARCH/485

Listed below are the chemosensory research areas involving Louisville, Hamburg, and Southampton. Objectives, personnel involved and their contributions are given for each work area.

Chemosensory Research

1. Aerosol Studies

- Objective - Determine the chemical and physical properties of aerosols important to smoke subjective properties
- People Involved -  
  
Louisville - Jim Daum (focus on nicotine levels and aerosol pH, buffer type, and added flavors)  
  
Southampton - Nazli Egilmez (focus on physical properties and their effects on sensory properties and chemical distribution)

2. Gas Phase Studies

- Objective - Determine the importance of gas phase composition to smoke subjective properties
- Person Involved -  
  
Louisville - Kelley St.Charles (focus on cigarette modifications and synthetic gas mixtures)
