

There are seven test market evaluations for which we have both store audit data and telephone survey data on share level. Three of these evaluations — Marlboro Lights, LYME and VANGUARD — were in markets where the product was available to all stores that wanted to carry it. The other four evaluations were in markets where the distribution of the test product was largely restricted to stores in the test panel established by Marketing Research. In these tests, fill-in distribution was not actively sought by B&W Field Sales.

The following table compares the share of market from store audits to the share of smokers from telephone surveys. The store audit data is at the same approximate time after launch as the telephone survey:

	Share of Market (Store Audits) %	Share of Smokers (Tele. Surveys) %
<u>Test Product Available to All Stores:</u>		
LYME (Ft. Wayne)	0.3	0.4
Marlboro Lights (Boston)	0.7	0.6
VANGUARD (Binghamton)	0.4	0.35
Average	0.47	0.45
<u>Test Product Restricted to Controlled Store Panel:</u>		
RALEIGH EXTRA MILDS (Wichita)	0.8	0.4
VICEROY EXTRA MILDS (Ft. Wayne)	0.7	0.45
TRAMPS 84 (Ft. Wayne)	0.5	0.3
TRAMPS 84 (Wichita)	0.5	0.3
Average	0.62	0.36
